

Client: client_1@ad.au, 展示 **preference: 26 empty**

As spec has described, project clients need to create and maintain projects, view students' preferences. On my project page, only project that create by themselves are displayed, On top left corner, there are two numbers that represent how many teams has been allocated, and the maximum teams allow. We are using the traffic light color to represent real time capacity. we implement the functionalities that client can create a project based on their needs(点 **create** 按钮, 然后随便输点什么). The PDF specification is optional (点保存). If the client finds errors during the creation process (点 **edit** 按钮, 随便改点什么), such as typos, or wants to change requirements, they can click the edit button to make changes (点保存). During the project assignment process, (点 **teams** 按钮) the client can view the teams that interested in their project at any time. (点击左上角第一个 **project**) If clicking on the project which reach the maximum teams, he will be asked if he want to process further. If the client believes a team does not meet their requirements, they have the right to reject that team (拒绝一个 **team**). When the client considers the project successfully done, they can click the archive button to confirm its completion and keep a record of it (随便选一个点 **archive**). If the client believes the project can't process further, and they do not want this project to affect other projects, they can delete the project themselves(把刚创的删除).
